**China Connections**

**Joint venture universities in China**

Studying at Chinese universities in Beijing as an Indian in the 1980s was a fascinating and memorable experience. I entered Beijing Foreign Languages Institute (now Beijing Language and Culture University) for a four-year BA program in Chinese language and literature when I was still in my mid-teens. I had no prior knowledge of Mandarin and the instructors spoke no foreign languages, yet they possessed the best pedagogical tools to teach Mandarin to novice foreign students.

Tansen Sen

I WAS STRUCK MOST by the intimate relation between the instructors and university students at this time where interactions between foreigners and locals were still restricted. Our Chinese lossis were not merely teachers, but also our host families, counselors, and friends. Thus, we received an education that went beyond class lessons and textbooks. It involved insights into the daily lives of people and a society that was on the verge of experiencing dramatic social and economic transformations.

After passing the national exams I enrolled in the MA program at Peking University. Suddenly I was taking courses with Chinese students that required significantly advanced Chinese language skills. Despite the strenuous curricular demands, the three years at Beida were equally enjoyable. I had a wonderful advisor, participated in various scholarly seminars, and even made trips to Tiananmen Square during the 1989 student protests. Education at the two Chinese universities has unequivocally shaped my academic career as well as my personal life.

The collection of articles in this section focuses on the new rise of Sino-foreign joint venture universities. In addition to offering new educational opportunities and programs, these campuses foster unique collaboration between Chinese and foreign students, faculty and staff members. While Chinese and foreign students also engage in similar opportunities at universities in Europe and the United States, the setting in China with pedagogical tools introduced from the world’s leading academic institutions provides a distinct educational value, a range of innovative curricula and unprecedented perspectives. With such shared educational training and experiences, graduates from these universities, as the articles imply, are expected to make significant contributions to the multicultural collaborations that define the globalized world of today.

Tansen Sen, Founding Director of the Center for Global Asia, NYU Shanghai (ks107@nyu.edu.cn).

**Sino-foreign joint venture universities: an introduction**

Collaboration in higher education between Chinese and foreign universities has been going on for over 30 years. The earliest collaboration, the Hopkins Nanjing Center, was established in 1986 and is still in operation today. Offering postgraduate programs to both Chinese and non-Chinese graduate students. However, it wasn’t until 1995 that the PRC State Education Commission developed provisional regulations to encourage Sino-Foreign collaboration in higher education. Between 1995 and 2003, 34 joint education institutes (JII) were established, offering multiple degrees developed in collaboration with foreign universities, two of which have since ceased operations. These JIIIs are effectively colleges of existing Chinese universities.

In addition to these JIIIs, single degree joint education programs (JEPs) were also permitted by the 1995 provisional regulations, with 438 being established between 1995 and 2003. In 2003, the Ministry of Education updated these regulations with a number of significant changes. Between 2003 and 2015, a further 33 JIIIs and 638 JEPs were established. However, the 2003 Regulations allowed for the establishment of a new breed of Sino-Foreign HE collaboration: the joint venture university (JV).

The JV differs from previous collaborations as it involves not partner universities, but parent universities who establish a brand new university with legal person status under Chinese law. It’s worth stating here that, in the PRC, there is no such thing as a branch campus: collaborations involving foreign partners are either established within existing Chinese universities, or in the case of JVs, establish a new Chinese university. Unlike the majority of conventional joint ventures, JV universities are a form of cooperative JV where the foreign parent university’s contribution is measured in their intellectual property input, with financial investment being provided from the Chinese parent and, more often, the local government in the municipality or province where it is established. Currently there are 7 JV universities in operation (see chart below).

While the regulations under which these universities have been established are the same, there are great differences between these universities due in large part to the educational philosophy and vision of the leadership involved in their establishment. Another major factor affecting establishment and ongoing operations relates to the Chinese parent university and the location in which the JV is established. For example, NYU Shanghai’s Chinese parent is East China Normal University (ECNU), which is itself located in Shanghai. ECNU is a key national university under the jurisdiction of the Ministry of Education. All JVs, however, report to the provincial education bureau or municipal education commission in which they are established, even if their parent university is a national university reporting to the Ministry of Education. This is perhaps less of an issue for NYU Shanghai who are in the same municipality as ECNU, their Chinese parent university, and who have strong existing relationships with the Shanghai Municipal Education Commission and other government bodies in Shanghai. However, compare this with NTU or DKU, who are both located in Jiangsu Province but whose parent universities are from Xian (Shaanxi) and Wuhan (Hubei) respectively, and there is an added complication in establishing relationships with the provincial education authorities; pricing bureaus who set the tuition fees, and other government bodies involved in the establishment and smooth operation of a Chinese university.

Sino-foreign JVs are fascinating examples of transnational higher education, and also of the experimental boldness of China’s higher education reforms. They have been permitted in order for China’s reformers to examine new and different approaches that may be adopted to address challenges in China’s vast and complex domestic higher education sector, especially with regard to China’s desire to internationalize their own universities and attract both foreign academics and students.

**Center for Global Asia at NYU Shanghai**

The Center for Global Asia at NYU Shanghai serves as the hub within the NYU Global Network University system to promote the study of Asian interactions and comparisons, both historical and contemporary. The overall objective of the Center is to provide global societies with information on the contexts for the reemerging connections between the various parts of Asia through research and teaching. Collaborating with institutions across the world, the Center seeks to play a bridging role between existing Asian studies knowledge networks. The Center’s mission is to build a platform for the articulation of a network of research-based institutions, including hosting conferences and enriching research projects. The Center also keeps strong connections with the Asia-Centers in mainland China and many institutions abroad.
A global supply chain of teaching and learning — Duke Kunshan University

Andrew Field

I HAVE BEEN Associate Dean of Undergraduate Programs at Duke Kunshan University for nearly two years now. Until our undergraduate degree program starts in Fall 2018, my main role is overseeing our Global Learning Semester (GLS). This program has offered many challenges and opportunities for the advancement of higher learning in China and for providing an international and China-focused educational experience to both faculty and students from all over the world. The semester-long GLS program brings undergraduate students from over 20 partner universities in China, together with international students, in a liberal arts style program at DKU. In addition to our Duke faculty who come to Kunshan to teach, we have a small team of DKU faculty who teach language and writing courses. Most of our Chinese students choose our Academic Writing course, which involves intensive training in US-style academic writing.

The first challenge that I faced when starting as Associate Dean, was to ensure that the processes of selecting courses and faculty, approving syllabi, and orienting faculty all go smoothly. All the courses and syllabus for our GLS program are vetted and approved by the majority of Duke faculty and are added to the Duke course catalog. Since our courses involve teaching many students for whom English is a foreign language, we have to ensure that the courses for our GLS program account for the different learning environments at DKU (opposed to Duke), while still maintaining the high quality of Duke courses, especially because our GLS program courses are awarded Duke credits.

In addition to running a Duke-quality program, taught mainly by Duke faculty in Kunshan, we also face the challenge of attracting students from Duke and other universities. Attracting more American students is challenging for several reasons: Duke students have to meet their major course requirements and other distribution requirements; and US students have the choice of many programs in China, some that are located in more well-known cities than Kunshan. Instituting a Kunshan Innovation Scholarship starting in spring 2017 has helped to attract more students from the USA, including students from liberal arts colleges that do not have Chinese-based programs of their own. Word of mouth has also been helpful, since most of our American students have greatly enjoyed the experience of living and studying with a largely Chinese student body in an international university setting.

A philosophy from the trenches – University of Nottingham Ningbo

James Mirrione

PLATO ONCE REMARKED that the origins of education were in the activity of play. As a theatre and drama specialist I have endeavored to bring some of that spirit to the pedagogical table throughout forty-five years of teaching, I have never known a student to praise me for following the syllabus. Instead, I treat the syllabus as a clock to run against. I do not expect students to any detour deemed more important than the pre-conceived path. I also force my students to stay with a difficult piece of literature, because the joy of discovery is what I believe lies at the core of true education. 

The need to take my students out of their comfort zones and I have found these necessitated to be especially relevant to my teaching experience in China and with Chinese university students. Here, the traditional style of education to applied in any setting or population. However, in China there is a need to re-mind students that you, the teacher, are a living human being. Very often, I have found myself in a class that has been competing with laptops, cell phones, iPods and electronic dictionaries. This has occasioned me to blurt out some non-sequiturs as “Two generations of students then have the following reactions: (a) Do I take notes? (b) Do I download this and, if so, what is the link? (c) Bare? Did two men hit their heads? (d) Who are you and where is the teacher? Technology has threatened all professors who make their living by being animated human beings; and, China has moved farther down the non-stop-golden-avant-brick road. Therefore, may these axioms serve as possible palliatives to the above dilemma and, as a primer as to what I do as a teacher.

1. Get out from behind the desk

You are on stage whether you like it or not. Students want to see the whole of your corporeal essence when you start to teach, not some disembodied head that constantly looks down at your dog-eared copy of the text that you read from, quoting your pearls of wisdom from the margins. Unless you are Stephen Hawking, this is a losing strategy; and, by the way, he is not shy at showing himself in full view so what’s your excuse?

2. If students could, they would steal your book and then you would become irrelevant.

You are not Moses reading from some elevated tome that has all the answers that students think they need, because all you do is read to them from it. Use the text as jumping off point; spin that verse, explore that image, wrestle that metaphor in the ground and be happy to get your fingers burned whenever an idea or concept reveals itself in the writing. If you do your students’ work for them they will treat you to this version of a watering fainted: “I could read the menu, but I cannot just let you drone on and decide for me in the hope that he shuts up.”

3. When you do read, make it dramatic

You don’t have to stand on the desk (although that might help) but put some life into it! If professors were judged on intrigue, beguiling, riveting, motivated and passionate they were about the given subject matter, and its delivery, then we might have a more accurate determinate as to the ‘mastery of the material.’ It certainly would become a challenging approach to what now passes for erudition, which is only that same misguided notion that has ruined Shakespeare, Beowulf, Milton, Dante (the list is long), for countless students who have had to endure only an anemic rendering of the words. Just because many of these authors are dead doesn’t mean you have to be. Make them read with you; let them be a character in opposition to your character; and, if you are doing a play, cast your students in as many roles as possible. You will be surprised to discover some latent thespians just waiting to take center stage.

4. The unexamined student is not worth your living with them for the period of the class

I always tell my students that they might not always understand me or agree with me but, they will never be bored. The classroom is the Bunsen burner to set fire to the coherency of sloopy logic, to the lazy-boy-recliner of easily spouted prejudices and to the presumed flame retardant natures of religious, social and political propaganda. If all you are is a parrot then students might as well buy the real avairy version of the creature. You were hired to be a qualyfied whether the institution knows it or not and even if it never lists that as a learning objective.

5. Strive for humor, not some academic version of Dracula

It was Horace who said it best: “…drama is the form of forms: there is no power to equal the dramatist’s art for moving the mind and mirroring the magical selen of art.” For me, this is a summation of my belief in the efficacy of my approach to use drama and theatre as a teaching tool, and, to treat education as an opportunity to create drama and theatre. This is where the classroom changes from a room to a stage and a stage into a platform for ideas. However, the challenges of teaching in China put it to the test of all these prescriptions. This is due to the complexities of language and the lack of familiarity with critical thinking. There is still an extreme learning curve for students to comprehend that to be critical is not akin to heresy; nor is it disrespectful to believe that teachers are infallible. Finally, these adages have been submitted, as well, to inject some reality into the rhetoric of cross-cultural learning that so many of our intuitions of higher learning traffic in whatever they are proposing joint Sino-Western educational ventures.

James Mirrione is a Visiting Professor of Theatre at the University of Nottingham Ningbo (James.P.Mirrione@nottinghemb.com.cn).

A student’s experience of multi-cultural immersion

Xuehan (Shirley) Zhao

I COULD SPEND YEARS trying to explain how much I appreciate my decision to come to NU Shanghai, but here I will share with you one aspect of my experience: multi-cultural immersion, and how it contributed to my understanding of global education. I am a Chinese national, born and raised on the Mainland, educated in key-point (zhongdian) public schools until Gaokao (Chinese College Entrance Exam). By studying and living with professors and fellow students from over 70 countries and even more cultural backgrounds from around the globe, I’ve been motivated to see things through a new lens.

Some things that I take for granted may appear novel to my non-Chinese friends. For example, I once mentioned the legal duty of Chinese people to take care of our parents, only to be unexpectedly broken by my non-Chinese friend. “You break the law if you don’t support your parents? No way!” I could tell how surprised she was, and, to be honest, so was I. I didn’t know how to respond to her reaction because, you know… “why would you not take care of your parents?” We ended up having a vigorous discussion about parent-child relationships, exchanging experiences in our own countries and bringing in various texts we had read in class on moral philosophy. Such occasions happen to me often. They surprise, excite, and inspire me and make me reexamine my world from various angles.

Being immersed in a multi-cultural environment also means being confronted with more serious differences. Sometimes my friends and I hold opposite opinions that can only be resolved by suspending the debate with “let’s go and get some food”; sometimes we joke about and mock one another’s living habits. Be it a casual chat or formal discussion, we don’t seek to convince others; instead, we acknowledge, understand and respect the unique positions and views that each of us holds.

I consider ‘multi-cultural immersion’ to be an essential part of a global education. For my education to be truly global, I’m not satisfied with knowing about, or touching upon, something non-Chinese. I want an immersion of variety, where I spend day and night with people of diverse backgrounds, worldviews and living styles. I’m eager to embrace the world, and am equipped with the ability and confidence to do so. Wherever on this globe I end up, I know I can and will thrive.

Xuehan (Shirley) Zhao is a sophomore majoring in Global China Studies at NYU Shanghai (shirleyhaozh@nyu.edu).
AS A SCHOLAR AND FICTION WRITER, I am interested in utopian narratives and the way that places designed upon an ideal can influence the population that inhabits them. So it isn’t surprising that I was deeply moved by the depiction of utopia in the film The Matrix. Our university is utopic, not in the sense that it is a perfect place, but in that our community was conceived of as a remedy to educational issues, such as China’s alleged education system that tends to prioritize memorization over the development of problem-solving skills with real-world application and Chinese students’ lack of preparation for developing global citizenship.

Sociologist and utopian expert Ruth Levitas writes “utopia is the expression of the desire for a better way of being or of being.” The utopian solution in this case is a seemingly simple one: provide a western education in a western language. Campus buzzwords are critical, creative, and English-only. Students are promised an education that builds these skills and provides preparation for further education and employment abroad. Our course curriculum is the same as that of our home campus in New Jersey and our pedagogy emphasizes student-centered learning, a contrast to the passive learning of power-point centered lectures that most Chinese students are used to. But these are only superficial techniques emerging from a larger, philosophical desire to shift the student from a consumer of knowledge to a producer of it.

Like traditional utopias, ours is rather isolated, situated at the foot of a mountain in the outskirts of Wenzhou, a city that has incorporated western business models, and is known for its economic and industrial development, but is slow to accommodate western culture. This can be limiting; unlike Tier 1 cities that host a large population of foreign experts, our students’ access to English-speakers is restricted to those they find on campus. But the isolation of the campus is also one of the benefits. It is a safe space where what is needed can be created. When students and faculty expressed the desire for coffee and a café culture, rather than ask the canteen to provide coffee we invited students to submit business proposals for coffee shops. The winning team now operates Social Dog, a coffee shop on the fifth floor of our campus building and where they know just how I love myAmericano. Similarly, we recognized the need for heightened verbal interaction and built the necessary elements into our introductory speaking courses. Groups of students interrupt classes (with an ok beforehand from the professor) to shout a line or two of poetry or a song. We term this ‘song bombing’ (my personal preference is to be ‘bombed’ with lines of Whitman). This can get competitive, with classes keeping records of who ‘owes’ who. The process may seem purely ludic, but it incorporates the elements of gamification, a growing field in western education. Students are not only practicing pronunciation, they are developing identities as proactive members of a community.

Developing more sophisticated levels of interaction, WZU has worked to make debate central to our campus culture. Fostering the students’ debating skills increases participation and builds analytical skills. Students who were once shy now argue aggressively and persuasively one another – and sometimes their professors. While aggression may not always be desirable, it is an overcorrection that will eventually balance out. More importantly, this willingness to engage is a mark of the students’ global personality that will serve them to endure this atmosphere of engagement has developed further community-building. While faculty and staff organize lectures and activities, students have developed a debating society, a finance club, and a host of other clubs as well as a media club to document and celebrate these clubs and their accomplishments. They are no longer passive observers, but people who shout lines of Whitman or Szymborska to one another, debate me in the hallway, and who are capable of engaging one another in the spaces they will inhabit in the future.

Jennifer Marquardt is Assistant Professor of English at Wenzhou-Kean University.
